

Why does my cat have a dull coat or dandruff?

- Is your cat getting a diet tailored to their age? Cats require different nutrients as they grow older. To help support these changes, you can now buy kitten and cat food tailored to the age of your cat: 2-12 months, 1+ and 7+
- Does your cat have parasites? You can check by looking through their fur using a fine tooth comb, by applying an appropriate treatment or by taking them to the vet.
- Are you grooming your cat regularly? Cats mostly groom themselves but sometimes a good brush is just what they need and love!
- Is your cat's weight preventing them from being able to groom? Check it using the WALTHAM S.H.A.P.E.™ guide.
- Does your cat have a sore mouth? This can be hard to see, so please take your cat to the vet.
- Have you changed your washing detergent recently? if so, that could be it! Consider changing back.

If all else fails, please seek advice from your vet.
